## Cape Town's Level 5 water restrictions - Walk-in factory service for pool covers reduces some of the hassle!

**Tests show that an uncovered 8x4m  
pool loses 105 litres a day to  
evaporation!**

Thermal GeoBubble pool covers are the most affordable way to stop 98% evaporation and ensure you have a water backup plan this summer, using your covered pool as a home reservoir! Saves power and chemicals too.

We offer a walk-in service at our factory in Ottery. Bring accurate measurements and leave with your pool cover. Allow for a 45 min wait. Trim the cover yourself at home using our easy DIY guidelines.

Drop us a [line](#) or visit our [website](#). You can also [order your cover online](#) and we deliver to your home. Please note that our factory walk-in service does not apply to covers with Rollup Stations or our child safety covers.

**FACTORY WALK-IN SERVICE:  
MON-FRI 8AM — 5PM  
SAT 9AM — 2PM  
11 HARRIS DRIVE, OTTERY,  
CAPE TOWN  
021 703 5880**

### Don't be tempted by cheap alternatives!

Recently the market has been flooded with very cheap material claiming to be thermal pool covers, when in fact it is just blue bubble packaging material. These cheap options won't last more than 6 months. If you are looking for affordability, it is far smarter to choose our high quality GeoBubble material.

#### ENERGYGUARD

#### SOL+GUARD

Also in the GeoBubble range is the [Sol+Guard](#) which is excellent for natural heating, and [EnergyGuard](#) which is a power-saving pool cover. Both stop 98% evaporation.
