## Factory clearance sale

### Excellent prices on pool covers and accessories during July only

We have a number of items in our factory that are perfectly good but need to be sold as 'seconds'. These pool covers are in 100% working order but are being cleared at factory prices.

#### 1. Multiple Weld GeoBubble Pool Covers

Thermal / bubble pool covers with a couple of joins in the width / length as opposed to minimal welds within the material. Joins are almost invisible!

#### 2. Solid Safety Covers

Good as new child safety pool covers to seal off the pool and prevent child drownings.

#### 3. Rollup Stations

To help with use of large GeoBubble pool covers. These Rollup Stations may have a scratch or two but nothing that would not happen a month into being around a pool.

To order, call or email [info@powerplastics.co.za](mailto:info@powerplastics.co.za) with accurate measurements and we will walk you through the order process.

### Did you know? An uncovered 8x4m pool loses 105 litres a day to evaporation!

GeoBubble pool covers are the most affordable way to stop 98% evaporation and maintain the right water levels to run your filter without using City water or grey water for top ups (which damages pool covers and pool pumps). Leaving a pool empty or half full can result in the shell collapsing or lifting out the ground. (see right).

### Did you know? A child is more likely to die from drowning than in a motor vehicle accident?

The PowerPlastics Solid Safety Cover forms a complete barrier over the pool with tamperproof fastenings for ultimate peace of mind when it comes to pool safety. Better still, because the water is covered, you get water, power and chemical savings as well as safety benefits from one cover.
